

TESTS FOR MEDITERRANEAN DISEASES

There is a test for Leishmaniasis, which is recommended for dogs and for pups after the age of 6 months

This is often done in conjunction with the 4DX Snap Test, which is a blood test that provides results in 8 minutes.

The test is a screening process for six vector-borne diseases:-

2. Heartworm,
3. Lyme,
4. Ehrlichia canis,
5. Ehrlichia ewingi,
6. Anaplasma phagocytophilum and
7. Anaplasma platys.
